**PST 8000 SERIES INSP Retail**  
**COMPLAINT:**  
01 JOHN DEERE INSPECTION

IN WEST END OF STORAGE

**CORRECTION:**  
Inspected tractor:

Codes  
ECU 62 Engine Coolant Temperature Moderately High. Clean the cooling package out.

PCU 17 Operator Not Seated w/ Transmission in Neutral Seat switch broken

ASU 33 Pressure Control Valve Circuit Fault seat problem. Would think it is a wire damaged B/c of other damage and a dead Rat by the flywheel.

SCU SCO 100 seat switch problem. Same problem as PCU 17

I can feel and hear the pressurizer fan running so It is going out.

Cab filters are dirty.

Rear roof amber lights are out.

EXTREMITY WARNING LAMP on the right side is not working. If it is just a bulb out.

Seat was low when I got in it don't know how long it was sitting may have slow leak.

The tractor seems to be smoking more then it should both white and black smoke. Based on hours it may need injectors. Would be 1200 cheaper with reman injectors.

Turbo to exhaust stack is leaking and the flex pipe.

Turnable front fender broken. \$400.00 more will get all new fender kit.

Hydraulic oil filters not marked and we have no service history. Should be changed at 1500 hours intervals.

COMPLAINT:  
02 Hydro service

### CORRECTION:

Drained the oil from the rear end and transmission housing. Drained the oil from the front hubs and front axle. Pulled the sump screen from the trans and rear end both where clean. Left the plugs out while I did other work. Reinstalled the screens and plugs then filled the system with new oil. Changed the hydraulic oil filter. Refilled the front axle and the front hubs. Ran the tractor and topped off the oil as needed.

03 Injector

### CORRECTION:

Cleaned the top of the engine off then removed the valve cover. Removed the injectors per the instructions. When the new injectors came in I installed them per the instructions. Well the valve cover was off I checked and adjusted the valves as needed. Installed the valve cover and then tested. The tractor seems to run better now.

Removed the turbo to stack pipe and installed the new one when it came in.

**COMPLAINT:**

04 Electrical Repairs

**CORRECTION:**

Electrical Repairs

Removed the rear amber lights from the roof and changed the terminals and installed new bulbs. Tested to make sure that fixed them.

The extremity light was a bad socket when I tried to change the socket some of the hardware that holds the extremity light together broke. So I had to replace the extremity light arms and put new hardware in place.

Replaced the seat cushion so it would hold the seat switch.

Checked the wires running to the active seat valve under the cab and found the ground wire had been chewed in half. Used wire and but connector to repair the wire. Tested and that cleared the code.

01 ECU 150.0 ENGINE IDLE IS NOT CONSISTENT  
CYLINDER #5 ELECTRONIC INJECTOR MECHANICAL FAILURE

JOHN 815 822 3965

#### CORRECTION:

I arrived at tractor, talked to customer about issues. After completing diagnostics all I could find is that number five injector must be faulty. I returned to customers farm another day and replaced number five fuel injector. I ran tractor for about half hour in customers barn lot and all seems to be just fine. I contacted customer on 11/4/22 and was wanting to know if replacing the number five injector fixed issues. Customer states that issues are still present, he is not sure what codes are coming up but they are fuel related. Customer states he would like these issues fixed before spring season next year. I informed customer that I would make note and inform service manager about issues.

Tractor ended up coming to shop for further repairs. These were addressed on segment two. Per Chris McMahan giving the customer credit for labor on first repair when Justin went out. \*\*

below are notes taken by Justin S

I arrived at tractor, talked to customer about issues. After completing diagnostics all I could find is that number five injector must be faulty. I returned to customers farm another day and replaced number five fuel injector. I ran tractor for about half hour in customers barn lot and all seems to be just fine. I contacted customer on 11/4/22 and was wanting to know if replacing the number five injector fixed issues. Customer states that issues are still present, he is not sure what codes are coming up but they are fuel related. Customer states he would like these issues fixed before spring season next year. I informed customer that I would make note and inform service manager about issues.

### CORRECTION:

Drove the tractor in the shop and ran a few test after some testing I noticed that the tractor was starting like it was low on fuel or the filters had just been changed. So I pulled the fuel pick up from the tank to make sure it was clean and it was. Talked with Justin to make sure I had the whole story of what happened in the field. Ran out of time in the day so I came back to it in the morning. Before I got into anything else I checked DTAC to see if there where any solutions and found 67316. Ran these test on the dyno and found that it was acting like it talks about so I ordered the valve that it calls for use in my tractor.

Installed the part it calls for then retested on the dyno and it is running much better. Removed the test equipment and put the tractor in the shed.

**COMPLAINT:**

01 AIR ASPIRATOR

Details:

CAUSE:

CORRECTION:

Talked with John on the phone and figured out what I would need looked up and ordered parts we didn't have most of what I needed so I had them ordered over night.

When the parts came in I went to the farm. Disassembled and removed the aspirator fan. Removed what was left of the old fan then pulled the old fan shaft and installed a new one. Installed a new fan. Installed a new belt tensioner it had changed so I had to change a bolt on the transmission so it would work. Installed a new belt. Tested and all was working as it should so I installed the shields and picked up tools.

COMPLAINT:

01 STEERING ISSUES

CORRECTION:

Disassembled the steering column apart and found that the steering pivot was lock was broken. removed it and order parts to fix it. When the new pivot came in i moved the parts from the old one to the new one and put it in. Made sure everything worked as it should then put the column back together.
