DIAGNOSE THROTTLE AND REPAIR

Ran tractor for several minutes at different rpms. Tractor would start running rough at 1300 to 1500 rpm. Ran diagnostics. Found it was ECU crank position input missing. Removed and replaced crank position sensor. Ran tractor and checked for codes. Problem was still there. Checked codes again. Had an ECU PWM throttle abnormal pulse width code. Started going through the diagnostics for that code pulled back cover off back of tractor for the control units. The diagnostics had me pull the plug off the CCU X991-1. Pulled off harness on ECU X330-1. Tested for continuity between the control units on plugs. Tested good. Plugged harness back into ECU. Hooked volt meter up to harness on CCU to test throttle. Had ignition on voltmeter. Hooked into J1. Tested voltage at no throttle and then tested voltage at full throttle. Test had to be 0.5 volts at no throttle and 4.8V at full throttle. PWM tested low on throttle. Determined that the CCU was bad and ordered new. Had to go through old CCU to record all the programs and settings. Installed new CCU on tractor. Reprogrammed all the settings

Diagnose and repair throttle flutter:  
Diagnosed customer complaint.  
Removed existing and installed new potentiometer, started tractor but got a code ACU 28 requiring calibration.  
Attempted a calibration and seemed to take. Cycled the key and started the tractor and got a code for SCV switch #4 and ACU 28 again. Performed diagnostic for the SCV code and found it needed replaced was well. Installed new sensor.  
Performed ACU calibration and tractor ran without any codes or issues.
