COMPLAINT:

COMBINE: flashers not turning off , field lights flicker , may be bad key switch

CORRECTION:

Went on service call. Nothing on turn signal lever was functional at all, everything else seemed to be working at this time. Flashers would turn on and off using the diagnostic address to send voltage to that circuit. Disassembled steering column and tested key switch, it was working as it should. Checked voltage to turn signal lever, CAN and power voltages were normal. Tried a different turn signal lever, no change. Thought this was a CAN bus issue somewhere else causing this. Noticed that the ground pin in the service advisor connector had a small amount of trace voltage, traced this issue into the cab roof (had to remove roof) but determined the stray voltage on the ground wire was not enough to be causing any issues. Finally at one point, noticed on accident that the turn signal lever would start working again when the steering wheel was positioned just right. Disassembled lower steering column and wiggled the wires to determine where the issue was. Repaired the broken wire and everything returned to normal.

COMPLAINT:

Oil leaking at rear of hydraulic pump.

CORRECTION:

Abe Rieke-
 Drove to service call
 Saw a fitting that looked like it was leaking
 Took fitting off and o-ring looked fine but I replaced it anyways in case
 Installed fitting
 Test ran and oil was still leaking
 Drove back to shop to pick up a new fitting to see if the fitting was cracked
 Installed new fitting and it did not stop the leak
 Determined that the pump was cracked
 Drove back to shop
 Picked up pump in parts
 Drove back out to service call
 Drained hydraulic reservoir
 Removed hydraulic lines and fittings from pump
 Removed pump mounting bolts
 Removed pump sealing o-ring
 Installed new o-ring and mounted new pump
 Tightened pump mounting bolts
 Installed fittings on pump
 Hooked up hydraulic hoses
 Filled hydraulic reservoir
 Filled engine gearcase
 Ran combine and found no leaks

COMPLAINT:

COMBINE: has code 1347.07

CORRECTION:

Matt C:

Went on service call and found fuel rail pressure normal, but low side fuel pressure would drop to 0.5 PSI when engine was under a load.

Removed sediment bowl and fuel flow was good, replaced fuel filters.

Low side fuel pressure would stay between 2.5 and 5 PSI with new filters.

Dan L:

Service call to customer's farm.

Removed and replaced fuel injection pump.

Cleared codes and test drove ok at this time.
