

LOOK TO AITCHISON!!

For The **BEST** No-Till Forage Drill At The **BEST** Price

- 7'-12' width 5"-6" row spacing - Affordable: \$1250 per row
- Sponge-feeding system sows forage mixes evenly
- Vibrating tine > soil tilth, covers all seeds
- Reduce seeding rates, increased emergence
- 50+ years mfg.

Aitchison Drill: ⊥-shaped slot prunes competing roots, slowing the growth of the existing sward. Creates soil tilth, increasing access to soil nutrients. Retains more moisture and more oxygen than other planting systems. Clean, smear-free, cocoon-shaped, ideal mini-seedbed, yields consistent, uniform stands.

Other Drills: The V-slot made by disc drills have frequent poor emergence due to toxic residue pressed into V-slot with the seed; and creates sidewall compaction. Poor depth control-over 50% of small seeds buried too deep or on top of the soil. Performance is speed sensitive.

T-SLOT SUPERIOR EMERGENCE

DISC V-SLOT

"With the Aitchison Drill we now have excellent seed-to-soil contact, even in dense sod and heavy clay soil. I have sown a 22 seed mix uniformly without separation"

– B.J. Gann, Pryor, OK
